

# WHY CHOOSE HOME HEMODIALYSIS

Performing your dialysis treatments in your home has many benefits

## Home dialysis benefit

- You are able to dialyze in the comfort of your own home.
- You can decide when to dialyze giving you more independence and control over your life. For example, this may minimize interruption to family and home routine.
- Travel time to and from the dialysis unit for treatment is eliminated. You will need to come for clinic visits approximately every 6 to 8 weeks.
- No parking costs as you will not need to visit the dialysis unit for treatment.
- You have the opportunity to dialyze longer and more often. This will allow you to feel better and may reduce some dietary restrictions and complications.
- The training will provide you with the knowledge and confidence necessary to assist you in the management of your dialysis treatment. When you complete your training, you will be provided with information explaining the best way to contact the Home Dialysis Nursing staff if you have any questions or concerns.
